Powerful Guitar Amplifier in stompbox shape

The Stomp-Head 5.CE is an ultra light, very compact floor amplifier with integrated foot-switch designed to be set on the pedalboard along with effects or placed directly on the stage floor. An amplifier-equipped pedalboard provides a complete ready-to-use sound system.

Simply connect your speaker cabinet, guitar and power source, and you are ready to go.

Fit amplifier inside your pedalboard

What are the benefits?

- Eliminates the need of large amounts of long and heavy wires to connect effect loops or amplifier switchers. Our entire amplifier takes less space and weighs less than a bundle of wires required to serve the amplifier set on your cabinet. As a result, when you eliminate all external wiring of the amp controller and FX Loop, your whole sound system is much lighter and takes a lot less space.
- There is no need for additional footswitches and circuits to control the Stomp-Head's functions, because they are all integrated into our compact amplifier. Also there is an option of controlling our amplifier via an external controller.
- Connections between the amplifier and the effects are easy to make and shorter than ever.
- Reduces problems related to the loss of signal quality due to long cables between the amplifier and effects.
- Fewer parts to wear and connect.
- Set up is extremely simple and takes just seconds. All you need to do is connect the speaker cabinet, plug power into the pedalboard, and hook up your guitars. Three wires – that's all.
- Less humming and interference noises due to connection short circuits.
- All the tone adjustment elements are in one place, in front of you on the pedalboard.
- Sound can be adjusted from the exact spot on stage where you play.
- Stomp-Head offers a whole range of on-board tones and features as a CLEAN, CRUNCH, DRIVE and BOOST functions. This eliminates the need for these effects on your pedalboard, and creates more space for other stompboxes.
