

BASS & GUITAR
AMPLIFICATION

New definition of guitar amps

Until today, guitarists could only choose between two types of amplifiers: heads and combos. Now, we are introducing a completely new breed of amp: **The Stomp-Head**. It is a pure analog design with unprecedented light weight and small size. The amplifier can be placed either on a stage floor just beside the effects, in a traditional way on the top of the speaker cabinet or set up on an effect board. It features a built-in foot switches which allows fast channel and sound shape changes during the performance. The Stomp-Head can be used as a power-amp for another preamp.
