

DBT - DEMO BOARD FOR TM1/TM2 PREAMPS

DBT module makes presentation of the sound of TM easy. While using DBT module there is no need to solder and install the preamp in a guitar. To link particular modules, just follow the instruction in the picture [the modules can be linked in any order]. Connect the DBT module output to amplifier input. Connect the guitar to the DBT input. While TM preamp presentation the guitar with passive output is recommended.
